

MAGNUS VOLK'S CAR NO.1 OF 1883

2ft gauge 4 wheel electric car from Volk's original electric railway.

This model is approximately 7mm / 1ft ('O' gauge). All you need is a craft knife, a rule and a tube of glue.

This is not a difficult task to undertake but please read - and try to understand - the instructions. Print the sheet out onto thin card. If in difficulty refer to the pictures on the website.

Main floor

Saloon floor

Dash boards
x 2

Canopy

Seats x 2

2 x sides and
ends

Curtains x 4

Wheel sets
and stiffeners

Cut out main floor, gently score the dotted lines (not the red ones!), and fold the grey side and end members downwards. A small spot of glue in each corner underneath should keep the joins together - if not fit small cardboard braces cut from the excess card. Cut out the Saloon Floor and glue this on top of the main floor.

Cut out the two sides end ends. Score and fold the tabs backwards as these will be glued to the floor. Score and fold the small end flaps back. Glue into place on the floor - the overlapping black strapping should be on the outside of the grey side members.

Cut out the seats, score and fold. The white tab at the bottom should be forced back as it sticks to the floor. The two triangular tabs are also folded back as they glue to the end pieces of the passenger compartment. The wider blue section is the seatback, the narrower piece is the seat and the brown piece is the kicking board. Glue the seats into place in the passenger compartment - they may need trimming so try fitting them first without glue! Cut out the wheelsets and fold them along the top of the black line. Use the stiffeners between the wheels to keep them to gauge. The wheelsets should be glued to the underside of the main floor with the wheel centres approximately 21mm in from each end. Cut out and fold the canopy, gluing the white tabs to the underside of the top. Cut out the curtains and score down the black line. Fold them at right angles and glue them to each corner of the passenger compartment. The gold cord should be level with the hand rail and the curtains hang down the outside of the compartment. Glue the canopy on top of the curtains, which should slide up into each corner of the canopy making a snug fit. Cut out the dashboards, score down the black line and fold and glue double. Glue to either end of the main floor. Finally cut out Magnus and pose him on the rear platform!
